

2009 New York Fungicide Decision Guidelines for Soybean Rust (SBR)¹

Soybean Growth Stage	SBR Risk	1st Spray	2nd Spray
Early-mid vegetative	NA	Do not spray	Do not spray
Late vegetative through R6	Low ²	Do not spray	Do not spray
	High ³	Section 18 fungicide	Section 18 fungicide ⁴
> R6	NA	Do not spray	Do not spray

1 Obtain SBR risk assessments from multiple credible sources .

2 Section 18 products all contain a triazole which will provide some post-infection activity. Application of a strobilurin + a triazole, although more expensive, may result in additional days of protection compared with a solo triazole-based product.

3 Do not follow a solo triazole spray with a solo triazole spray; days to harvest restrictions may apply for these fungicides.
